

Daniel Adel Helmy

Flutter Developer | Mid-Level Flutter Developer

Cairo, Egypt

+20 122 508 4331 danieladel217@gmail.com | GitHub | LinkedIn

Professional Summary

Flutter Developer with 2+ years of professional and hands-on experience building scalable, production-ready mobile applications across freelance and professional company environments. Applies Clean Architecture, MVVM, and SOLID principles with Cubit/BLoC state management to deliver maintainable, role-based applications integrated with REST APIs, Firebase, and Supabase. Experienced in building real-time systems, location-based features, and payment/subscription workflows, with an emphasis on testing, performance, and production readiness. Works independently to translate requirements into complete Flutter implementations, taking ownership of features from architecture through delivery.

Experience

• ILC Soft

Flutter Developer

Cairo, Egypt

Dec 2024 – Present

- Own Flutter development as the primary mobile developer, translating requirements into complete applications and features built from scratch.
- Design application architecture using Clean Architecture, MVVM, and SOLID principles, applying Cubit, BLoC, Provider, and Riverpod for state management.
- Integrate REST APIs, Firebase, and Supabase to implement authentication, role-based access control, and backend-driven functionality.
- Build complex, real-time functionality including live chat, notifications, location-based features, and payment/subscription integrations.
- Optimize application performance and reliability through targeted testing, debugging, and Git-based workflows, and contribute to application releases and publishing.
- Contributed to the development and release of Roya & Bushra, a subscription-based dream interpretation platform, implementing text/voice dream submission, an admin-to-interpreter assignment workflow, and anonymous real-time chat with role-based access for customers, interpreters, and administrators.

• Cellula

Flutter Developer Intern

Remote

Feb 2025 – Mar 2025

- Contributed to feature implementation and bug fixing in real-world Flutter applications, integrating Firebase Authentication and Firestore.
- Improved code readability and structure under senior developer mentorship within a professional development environment.

• Freelance

Flutter Developer

Remote

Jun 2024 – Dec 2024

- Owned end-to-end Flutter development across 4 client projects, communicating directly with clients to gather requirements.
 - Independently built complete applications from requirements through development, testing, and delivery.
 - Delivered production-ready Flutter applications tailored to individual client needs.
-

Projects

• Elite Car – Completed – Preparing for Google Play Release

GitHub

- Built a multi-application car washing service ecosystem from scratch, with separate User, Employee, and Admin apps supporting role-based booking, driver assignment, pickup, and delivery workflows.

- Implemented weekly, monthly, and per-wash subscription plans alongside cash and InstaPay payment support, with live order tracking and Google Maps integration for real-time status visibility.
- Engineered the app with secure authentication and storage, offline support and caching, and localization with RTL support, ensuring a production-ready, resilient codebase ahead of Google Play release.

• **Roya & Bushra — Released on Google Play**

GitHub

- Built a subscription-based dream interpretation platform from scratch, supporting per-submission subscriptions with cash and Fawry payment integration for text and voice dream submissions.
- Designed an anonymous real-time chat system connecting users and interpreters without exposing personal identities, including interpreter reassignment and admin-managed conversation monitoring.
- Implemented role-based workflows across customer, interpreter, and admin roles, with an admin-driven dream assignment process and push notifications powered by a Supabase backend.

• **Servio**

GitHub

- Built a two-sided service marketplace connecting users with technicians, supporting both direct technician selection and broadcast service requests with defined service type and budget.
- Implemented location-based technician discovery that ranks nearby technicians by proximity, backed by real-time chat, push notifications, and problem image/file uploads for clear request context.
- Integrated Supabase and Firebase Cloud Messaging to support the complete request lifecycle from submission through cash payment.

• **Dive Connect — In Development — Preparing for Google Play Release**

GitHub

- Built a multilingual, two-application platform connecting tourists with divers, enabling trip browsing and diver selection based on rating and spoken languages.
- Designed an admin-managed workflow for reviewing, approving, and assigning tourist trip requests to divers, alongside diver course management.
- Implemented live trip tracking with Google Maps and an emergency response system enabling tourists to report issues and alert nearby divers in real time.

• **Markety**

GitHub

- Built a combined e-commerce and social commerce platform from scratch, supporting User, Merchant, and Admin roles across product management, ordering, and search.
- Integrated social engagement features into the shopping experience, allowing merchants to promote products through shareable content while users interact and discover products socially.
- Implemented multiple payment methods, including Paymob, Fawry, and cash, with real-time notifications powered by a Supabase backend.

• **Dwellio**

GitHub

- Built a two-sided accommodation marketplace connecting students/users with property owners, featuring location-based property discovery with search and filtering.
- Implemented booking, favorites, and in-app chat on a Supabase backend, delivering a complete property search-to-booking experience.

Technical Skills

- **Mobile Development:** Flutter, Dart, Responsive UI, Localization, RTL
- **Architecture & Design Patterns:** Clean Architecture, MVVM, SOLID Principles, Dependency Injection (GetIt), Repository Pattern
- **State Management:** Cubit, BLoC, Provider, Riverpod

- **Backend & Networking:** REST APIs, Dio, Retrofit, Firebase, Supabase, JSON Serialization (Freezed, json_serializable, build_runner)
 - **Authentication & Security:** Authentication, Authorization, Role-Based Access Control, Secure Storage, Session Management
 - **Database & Local Storage:** Supabase, Firebase, SharedPreferences, Hive, Offline Caching
 - **Real-Time, Notifications & Location:** Real-Time Systems, Real-Time Chat, Push/Local Notifications, Google Maps, Geolocator, Live Location Tracking
 - **Payments & Media:** Paymob, Stripe, Fawry, InstaPay, Image/File Uploads, Media Compression
 - **Testing & Development Tools:** Unit/Widget/Integration Testing, GoRouter, Git, Postman, Android Studio, VS Code
-

Education

- Egyptian E-Learning University (EELU) — 2020–2024
Bachelor's Degree in Computer Science | GPA: 3.65/4.0
-

Languages

- Arabic: Native
- English: Intermediate (B1)
